BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This study seeks a numerical algorithm which optimizes frequency precision for the damped sinusoids generated by the nonresonant LITA technique. It compares computed frequencies, frequency errors, and fit errors obtained using five primary signal analysis methods. Using variations on different algorithms within each primary method, results from 73 fits are presented. Best results are obtained using an AutoRegressive method. Compared to previous results using Prony's method, single shot waveform frequencies are reduced approx. 0.4 and frequency errors are reduced by a factor of approx. 20 at 303K to approx. 0.1. We explore the advantages of high waveform sample rates and potential for measurements in low density gases. This item ships from La Vergne, TN. Paperback.
